Sangiran is an archaeological site in Central Java, Indonesia. It is located 17 kilometers north of Surakarta Municipality, on Bengawan Solo river valley. According to UNESCO report, Sangiran is claimed to be one of the most important sites in the world to study human fossils by scientists, aligned with Zhoukoudian sites in China, Willandra Lakes in Australia, Olduvai Gorge in Tanzania, and Sterkfontein in South Africa. Furthermore, Sangiran is considered as one of the world's research centers on the history of ancient human existence, more than 50% of ancient human fossils were unearthed in Sangiran.

At the provincial level, based on Central Java Provincial Regulation No. 10/2012 on Master Plan of Central Java Regional Tourism Development (RIPPRDA), Sangiran area is designated as Provincial Tourism Strategic Area (Kawasan Strategis Pariwisata Provinsi, KSPN) Sangiran and its surroundings that are located in Provincial Tourism Destination Area “Solo – Sangiran and Surroundings”. Sangiran area has historical and cultural tourism potential with historical heritage tour products.
Detail Plan of KSPN Sangiran and its surroundings is focused on tourist destination in the main area of KSPN which is divided into 2 sub-regions, namely:

1. Sub Area 1, includes: Sangiran Ancient Human Site, Batik Pungsari-Kliwonan Tourism Village, Padepokan Keris Brojobuwono, Sangiran Edutainment Park, Sangiran Tourism Forrest, Tourism villages and homestay, and Tourism Dam;
